METEOSTAR, A DIVISION OF SUTRON CORPORATION

PRESS RELEASE

MeteoStar donates LEADS® software suite to Oklahoma University

LEADS® to be used by OU School of Meteorology to promote advances in research and operations.

Norman, OK, July 30th, 2012: MeteoStar, A Division of Sutron Corporation, today announced the donation of their LEADS® meteorological software suite to the University of Oklahoma (OU) School of Meteorology (SoM). LEADS® will be used to promote advances in ongoing meteorological research as well as to support current SoM operations that require visualizations solutions, such as the Oklahoma Weather Lab (OWL) and the HOOT Development Lab. OU also plans to utilize LEADS® in a classroom setting to expose students to commercial meteorological tools. LEADS® system installation and training is tentatively scheduled for late August.

"This donation will benefit our students as the job market is highly competitive. Having experience with a widely used software system will boost their technical skills for future employment, while enhancing the educational mission of the school," said Dr. David Parsons, Director of the OU School of Meteorology.

Dr. John T. Snow, Regents' Professor of Meteorology, noted, *"Having the LEADS® software available for training forecasters from countries where MeteoStar has sold the software to the national hydro-meteorological service will make OU much more competitive in its efforts to become the international training center of choice in weather applications and practice"*.

Both MeteoStar and OU SoM view this project as a catalyst that helps to solidify a long-term, positive relationship.

Headquartered in Englewood, CO, MeteoStar has been a leader in the environmental analysis, display and integration/distribution systems market for the meteorological, aviation, and hydrology community since 1987.
